PROJECTS

Weather Data Analyzer Expense Tracker App

Description:

A Python-based command-line tool that retrieves and analyzes real-time weather data from an API. The program calculates temperature, humidity, and forecast summaries for a given location.

Book Library CLI App

A command-line application that manages a personal book library. Users can add, remove, search, and display books in their collection, allowing them to track their reading.

- **Programming Languages:** Java

Expense tracker app

Description:

A simple web-based app for tracking daily expenses. Users can log expenses, view totals, and categorize their spending habits. This project applies frontend development skills and some basic JavaScript logic.

- **Programming Languages:** JavaScript
- **Web Technologies:** HTML, CSS, JavaScript
